Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently Amended) Positive electrode material, wherein:

plural primary particles <u>of planar type</u> are flocculated and a secondary particle is formed:

length in which the plural primary particles are linked on the section of the secondary particle is equivalent to 10 to 70% of the length of the whole periphery on the section of the plural primary particles;

the secondary particle is represented as $Li_aMn_xNi_yCo_zO_2$; and the secondary particle is composed of crystals having layer structure of composite oxide meeting $1 \le a \le 1.2$, $0 \le x \le 0.65$, $0.33 \le y < 0.5$, $0 \le z \le 0.65$ and x+y+z=1.

- 2-5 (Canceled).
- 6. (Previously Presented) Positive electrode material according to claim 1, wherein:

the mean diameter of the primary particle is 0.2 to 10 μ m.

- 7-9 (Canceled).
- 10. (Currently Amended) A lithium secondary battery for an automobile, comprising:

a positive electrode made of the positive electrode material, a negative electrode, and a non-aqueous electrolyte,

wherein the positive electrode material comprises a plurality of secondary particles, each of the secondary particles comprising:

a plurality of primary particles composed of <u>planar</u> crystals having a layer structure of a composite oxide represented by $Li_aMn_xNi_vCo_zO_2$ where $1 \le a \le 1.2$,

 $0 \le x \le 0.65$, $0.33 \le y < 0.5$, $0 \le z \le 0.65$ and x + y + z = 1, the primary particles being flocculated and linked to form the secondary particle;

wherein a length in which the plurality of primary particles are linked on a section of the secondary particle through a substantial center of the secondary particle is equivalent to 10 to 70% of the length of the whole periphery of the plurality of primary particles on the section of the secondary particle.

- 11. (Canceled).
- 12. (Previously Presented) The lithium secondary battery for an automobile according to claim 10, wherein the mean diameter of the primary particle is 0.2 to 10 μm .
 - 13. (Canceled).
- 14. (Previously Presented) The lithium secondary battery for an automobile according to claim10, wherein a voidage of the secondary particle is 2.5 to 35%.
- 15. (Currently Amended) A lithium secondary battery for an automobile comprising a positive electrode comprising a plurality of the secondary particles, a negative electrode and a non-aqueous electrolyte, each of said secondary particles comprising:

a plurality of primary particles compound-composed of planar crystals having a structure of a composite oxide represented by $\text{Li}_a \text{Mn}_x \text{Ni}_y \text{Co}_z \text{O}_2$ where $1 \le a \le 1.2$, $0 \le x \le 0.65$, $0.33 \le y < 0.5$, $0 \le z \le 0.65$ and x + y + z = 1, the primary particles being flocculated and linked to form the secondary particle;

wherein a length in which the plurality of primary particles are linked on a section of the secondary particle through a substantial center of the secondary particle is equivalent to 50 to 70% of the length of the whole periphery of plurality of primary particles on the section of the secondary particle.

- 16. (Previously Presented) The lithium secondary battery for automobile according to claim 15, wherein a voidage of the secondary particle is 2.5 to 35%.
- 17. (Previously Presented) The lithium secondary battery for automobile according to claim 15, wherein the mean diameter of the primary particle is 0.2 to 10µm.
- 18. (Previously Presented) Positive electrode material according to claim 1, wherein voidage of the secondary particle is 2.5 to 35%.
- 19. (New) Positive electrode material according to claim 1, wherein voidage of the secondary particle is 2.5 to 10%.
- 20. (New) The lithium secondary battery for automobile according to claim 15, wherein a voidage of the secondary particle is 2.5 to 10%.
- 21. (New) The lithium secondary battery for an automobile according to claim10, wherein a voidage of the secondary particle is 2.5 to 10%.
